

# Smart Golf Clubs

By Mary Beth Regan

June 17, 2005

Golf pros are impressed with new technology that lets players download an analysis of their swing on a personal computer.

SmartSwing Golf ([smartswinggolf.com](http://smartswinggolf.com)) has developed clubs that combine swing-analysis software with high-tech circuitry that lets you store and analyze as many as 100 swings on a computer screen.

The system uses infrared trackers, gyroscopes and accelerometers placed inside the club's shaft. Data are then sent wirelessly to your computer, or can be downloaded with a USB device. Players can analyze their swing for launch angle, ball flight and club-head speed. Players can even compare their swing with that of a pro.

At the moment, there are three SmartSwing clubs available: a driver, 3-wood and 6-iron (plans for a putter are in the works). Or you can retrofit your own club with the technology. Cost is \$650 to \$800.

Bottom Line: Golf pros give the SmartSwing a thumbs-up. It's probably not going to turn you into Tiger Woods, but it may improve your stroke.
