

SMART BOMBER

# Get This!

The SmartSwing Driver gives you all the swing data you could ever want—without any of the demeaning laughter.

**P**HILOSOPHICAL QUESTION: IF YOUR driver could talk, what would it say? (Besides “Please, not the Snoopy headcover!”) Perhaps something like, “You’re too steep” or “Clear those hips for more clubhead speed.” Behold the new SmartSwing Driver. The wireless, 420-cc club talks to you (sort of), thanks to movement-sensing circuits and tiny gyroscopes inserted in the shaft. Simply smack a few balls, then download the data onto your PC or laptop. Your simulated move appears juxtaposed with an ideal animated swing, and you get instant feedback on launch angle, ball flight, clubhead speed and clubhead lag. After seeing his flat backswing in pixel form, our tester made a more upright move and turned the mother of all hooks into a drum-tight draw. \$649-\$799; [smartswinggolf.com](http://smartswinggolf.com); also available in 3-wood, 6-iron
